

Manual J, S, & D Overview

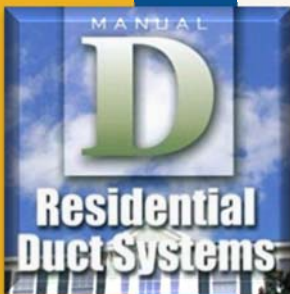

What is the Manual J?

The Manual J is how residential heating and cooling system needs are calculated. These calculations are based on construction components, local climate conditions, and the solar orientation.

What is the Manual S?

The Manual S is the equipment schedule. This portion of the report details the capabilities of the equipment being installed to satisfy the calculated design load from the Manual J.

What is the Manual D?

The Manual D is the duct design. This portion of the report details how the conditioned air will be delivered throughout the home. (Manual D may not always be applicable)
